3.3	Known Behavior.....	4

## 1 Document Purpose

This release note document for Automation Anywhere Enterprise (AAE) Client 10.7.0 describes enhancements and bug fixes resolved in this release.

## 2 Installation and Upgrade Notes

### 2.1 Installation Pre-requisites

AAE Client 10.7.0 consolidates the enhancements delivered through the hotfixes of 10.5.0 (10 SP2). Refer [section 3.1](#) for details.

**Important** – Upgrading to 10.7.0 is optional if you are already using AAE 10.5.x. We plan to keep rolling out hot fixes for all critical issues of AAE Client 10.5.x line as needed.

Refer *Automation Anywhere Enterprise 10(LTS)\_SP2\_Installation Guide* for installation steps and prerequisites

### 2.2 Upgrade to AAE Client 10.7.0

AAE Client 10.7.0 is compatible with 10.5.x Control Room. You need to upgrade your Control Room to 10.5 (10 SP2) version first. For details to upgrade to 10.5 Control Room, please refer the Release Notes and Installation Guide of AAE 10.5.

If you are on AAE 10.x (10.0 onwards), 10.7.0 Client installer will automatically uninstall the 10.x client and will install 10.7.0 client. If you are on AAE 8.x/9.x, you will need to first uninstall the client and then reinstall it using AAE 10.7.0 installer.

### 2.3 Version Compatibility

- TaskBot(s) created in earlier releases are compatible with this release.
- TaskBot(s) created in this release using new features shall not work if it downgrades to earlier versions.
  - **For Example:** TaskBot(s) created in the current version of AAE 10 SP2 with Regional List Separator enabled in Read from CSV/Text command shall not work in AAE 10 LTS.
- MetaBot(s) created in earlier versions are compatible only if the product versions of Client and Control Room are same.
- To uninstall an earlier version of AAE, say 9.x.x, ensure you uninstall it using the Installation Setup provided for the same version.

### 2.3.1 Control Room – AAE Client Compatibility Matrix

Client Version ↓	Control Room Version →							
	10.0.0	10.0.1	10.0.2	10.1.0	10.2.0	10.2.1	10.3.x	10 SP2
10.0.0	✓	✓	✓	✓	✓	✓	✓*	✓*
10.0.1	✓	✓	✓	✓	✓	✓	✓*	✓*
10.0.2	✓	✓	✓	✓	✓	✓	✓*	✓*
10.1.0	X	X	X	✓	✓	✓	✓*	✓*
10.2.0	X	X	X	X	✓	✓	✓*	✓*
10.2.1	X	X	X	X	✓	✓	✓*	✓*
10.3.x	X	X	X	X	X	X	✓**	✓
10 SP2	X	X	X	X	X	X	X	✓
10.7.0	X	X	X	X	X	X	X	✓

✓\* - From version 10.3 onwards, MetaBots are stored as “Single File Format”, as opposed to the old folder based structure. Therefore, MetaBots created in earlier versions cannot be used with the 10.3.0 Control Room.

✓\*\* - The Control Room version must be equal or higher than the Client version.

## 3 Client

### 3.1 Features and Enhancements

AAE Client 10.7.0 consolidates the enhancements delivered through the hotfixes of 10.5.0 (10 LTS SP2). These Enhancements are listed below. If you are on 10.5.x, these enhancements are already available to you through respective hotfixes. AAE Client 10.7.0 upgrade is optional and you can carry on with base 10.5.x Control Room and 10.5.x Client, with below enhancements available through hotfixes.

#### 3.1.1 Auto-login timeout increased

In this feature, we have increased default timeout period for Auto-Login to handle cases when Auto-Login process takes more time. Earlier if auto-login took more than the standard timeout set in AA.Settings.xml file, then auto-login used to fail.

#### 3.1.2 Silent Installation for Chrome Plugin

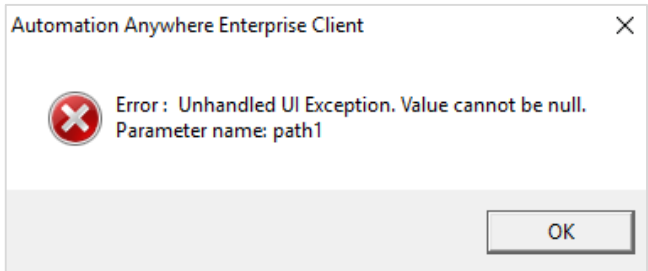

AAE now supports silent installation for Chrome Plugin by using AAPuginInstallation utility. To silently install Chrome Plugin, by using command line add the parameter: “C:\Program Files (x86)\Automation Anywhere Enterprise 10.5\Client\AAPuginInstallation.exe” /chrome /silent

Please note, silent installation of Chrome plugin restricts the system from displaying any messages.

#### 3.1.3 AAE Client Installer Enhancements

With every release, we make ongoing enhancements to improve customer experience. In AAE 10.7.0 release, we have optimized AAE Client installation to minimize its footprint for better product performance.

## 3.2 Bug Fixes

Zendesk Ticket ID	Description
#62369, #62542	<p>In case of windows login for Active Directory users (AD) when user attempted to key-in credentials using upper-case and lower-case, the windows login stopped responding. Thereby, concurrently two sessions got added in <i>UserSessionDataStorage.dat</i> for same windows login.</p> <p>Example: User Jon Snow, logged-in with the credentials: JON.SNOW, performed actions for several hours and logged-out. Then the user logged-in again with the credential: jon.snow, the windows login did not respond as it was case-sensitive. And it also added two entries for the same windows login.</p>
#60676	When user tried to deploy Bot with dependencies and uploaded it to Control Room, an error "File not found" appeared.
#49400, #60590	User was unable to perform Auto-login when the machine was in a logoff state.
#50980	For MetaBot Designer, when a MetaBot logic was used for applet applications of older versions the objects were not captured by the MetaBot. Hence, the proceeding commands got affected resulting to failure of the task.
#59621	As user tried to drag and drop specific commands such as Image Recognition, Object Cloning, Manage Windows Control, the Task Editor stopped responding.
#57373	Due to "Automation.Autologin.setting.xml" file being corrupted, auto-login function stopped responding on the Client machine.
#59621	When a user invokes the Image Recognition in the Task Editor using a drag and drop operation, Automation Anywhere Client stops responding
#66633	<p>In MetaBot Designer, when MetaBot logic is used to set text it does not work and the player stops responding. Thereby, giving the following error:</p> 

### 3.3 Known Behavior

1. For Auto-login to work without any interruption, after installation of 10.5.1 patch, make sure system32 folder has the latest version of "Automation.Credentialprovider.dll" (1.0.0.1). In case if it is not the latest one, we recommend to manually replace it with the latest dll as per your OS(32\64 bit). The latest version is available in AAE Client installation folder.
2. While performing a back to back deployment of a TaskBot, a successful message is displayed even though the Client fails to execute the deployed task that was marked as successful. (Zendesk ID-59445,61248,63686,63772)
3. To perform Download, Rollback, and Undo Checkout operations on any MetaBot, make sure the corresponding MetaBot is not opened in the MetaBot Designer. This is recommended so that user doesn't inadvertently overwrite the Control Room downloaded MetaBot with the locally opened copy of the same.
